Experience

Director at Siberia, LLC (http://siberia.io)

November 2014 (2014-11-01) to Current

Los Angeles, CA

Joined Siberia, LLC as a lead to help develop product based solutions for our client's business problems. Was promoted to Director and subsequently made a Partner before we were acquired by MediaLink.

- Brainstorm solutions for the digital products of Siberia's clients
- Lead the engineering team in crafting solutions
- Develop rototypes and full technical solutions
- Create on boarding documentation for technical resources

Developer as an Independent Contractor

February 2010 (2010-02-08) to December 2016 (2016-12-01)

Performed development work for clients as both a sole developer and as a member of the client's existing team. Over six years as an independent contractor I worked for a variety of client's ranging from individuals building their personal site, to large international agencies.

- Architected and built the Android client for a client enabling conference calls with end-to-end encryption
- Built reporting features into an existing Ruby on Rails site
- Defined content types, coded server and client side components sites running PHP based CMS
- Worked with client side engineering teams to write and style templates based on provided designs
- Wrote and maintained and JavaScript components
- Designed and developed demo applications in Java and Scala for natural language processing and sentiment analysis engine

Senior Software Engineer at AKQA, Inc. [NY] (htt://akqa.com)

November 2006 (2006-11-20) to February 2010 (2010-01-29)

New York, NY

I was the first engineer hired by the New York office and as such wore many different hats while there.

- Stepped into a Management role leading a team of developers working on a top to bottom re-launch of a Smirnoff's online presence
- Designed, Developed and Maintained re-usable JavaScript classes to be used as company resources by other web developers
- Developed and Maintained HTML, CSS, and JavaScript used in site redesigns for multiple clients, including Smirnoff, Motorola, and Benjamin Moore
- Created a module to augment the Magnolia CMS' functionality to fit the specific needs of Smirnoff's brand team
- Developed and Managed Java integration points for third-party vendors and internal teams for Aircell's new product, GoGo

Systems Analyst at Devis (http://devis.com)

June 2004 (2004-06-01) to November 2006 (2006-11-10)

Arlington, VA

The First Gig. An incredible learning experience in a wildly different environment than everything that has come after.

- Designed, Developed and Maintained Java Web Applications utilizing three-tier or multi-tier architecture in a small team environment
- Designed and Implemented a reporting module improving Devis' ability to efficiently and rapidly add reporting capability to systems in production or development

Education

Bachelor of Science in Physics with Minors in Computer Science and Philosophy from Juniata College (http://juniata.edu)

August 2001 (2000-08-01) to May 2004 (2004-05-01)

Huntingdon, Pennsylvania
